

33 years industry experience

... the value is in the detail

Sensors you can count on

Accurate can counting is **vital for reliable monitoring** of production and spoilage data. Sencon's **unique can counting sensors** automatically detect the direction of product flow, so that **no cans are counted twice** even if they bounce backwards or shake in front of the sensor. They have **no trouble** achieving the **correct sensing distance** even when cans are loosely packed.

... renowned worldwide for their accuracy and reliability

Models available for standard or slimline cans and beverage end counting
